Players who own the Operator title are often seen as leaders, automatically becoming the figurehead of a world they reside in. Operators can do all sorts of things, from rewiring the whole world constitution, adding modifications, switching gamemodes– anyone who has been granted such power can do anything that they want– although not without consequences. It will come creeping to them ever so slowly.

And for this server itself, "Playwright" started as a plain and ordinary Survival world with the ability to return to life after dying, in its hardest difficulty with minor tweaks of Keep-Inventory setting enabled, allowing players to retain their belongings after death to save players from losing their items every time they lose their life. In this book, they have gone through two seasons with the same cast from all kinds of backgrounds and stories of their own. More players eventually join them as time progresses and seasons pass.

14 players were living their peaceful life until they started hearing voices in their heads- voices who did not belong to any of their Operators, both begging for them to listen to what they had to say.

Basic world-building is inspired by the game "Minecraft". This is based on Playwright SMP's server original characters' roleplay. The players' lives are recorded and written similar to progress reports. This novel is formatted by days and weeks and is written from [The Director]'s point of view.
